

Description

- PathFinder is a database containing chemical intermediates and end products. More than 12,000 end products in the pharmaceutical, agrochemical, dye and pigment industries are included. PathFinder allows you to identify opportunities for selling your intermediates. It is an extremely valuable sales and marketing tool.

Usage

- Find users of a specific intermediate.
- Find the end products that the intermediate is used to produce.
- Learn the synthesis path of the end product.
- Determine new markets for intermediates since the same intermediate crosses over into different sectors of the chemical industry.

Scope/Coverage

- More than 12,000 end products
- Almost 13,000 chemical intermediates in the pharmaceutical, agrochemical, dye and pigment industries
- Over 16,000 different synthesis paths (applications)
- More than 13,000 users

Formats Available

- CD-Rom, Single User, updated twice per year.
- Internet Access, Individual User accounts, updated daily.
